

Chatbot technology has been around for decades, but it has recently become more popular due to advances in artificial intelligence (AI). Chatbots are computer programs that use natural language processing (NLP) to simulate conversations with humans. They are used in a variety of applications, from customer service to marketing and sales. Chatbots are becoming increasingly popular due to their ability to provide quick and accurate responses to customer inquiries.

Chatbot technology is based on the concept of natural language processing (NLP). NLP is a branch of artificial intelligence (AI) that enables computers to understand and interpret human language. NLP is used to create chatbots that can understand and respond to user input. Chatbots use NLP to interpret user input and generate appropriate responses.
